

Consult emdc

Consult emdc © 2025

Our Past & Present

- Creation of **CONSULT**, specializing in Mechanical, Electrical & Plumbing Design, Vertical Transportation and Value Engineering and Peer Review services.

- Creation of **EMDC** as sister company, enhancing Consult's workforce and adding to the group a deep expertise in ICT Systems and Renewable Energy Technologies in the Design and Shop Drawings services.

- Creation of **CONSULT EMDC** FZCO in the UAE to become an attraction hub for an expanding clientele. The purpose of CONSULT EMDC is to secure coordinated solutions in terms of Mechanical, Electrical, Plumbing & ICT Engineering as well as BIM solutions starting at 3D and extending till 6D.

- Collaboration between **CONSULT EMDC** and **Optimal Engineering Company for Engineering Consultancy (RCS)** - registered in Saudi Arabia - whereby CONSULT EMDC offers electrical, mechanical and plumbing designs and technical support services while RCS ensures the necessary representation in the Saudi market. RCS is thus locally representing CONSULT EMDC in KSA, securing that their services are fully compliant with the Saudi requirements and is managing CONSULT EMDC's delegated engineers in KSA. CONSULT EMDC is represented in RCS management board.

- **CONSULT EMDC** established a branch office in Cairo, engaging in similar MEP activities, completing them by a startup team of Architects.

- **CONSULT EMDC** acquires the ISO 9001 certification, meeting the prequalification's requirements of international companies. The certification was successfully renewed in 2025 with zero nonconformities from the certification body.

Who We Are

We are guided by optimism. We use the power of design to inspire a positive change and create a future that promotes wellbeing for all, in line with the latest sustainability trends. We focus on the importance of preserving nature and its resources and encourage our clients to apply any opportunity to reduce the overall impact of the built-up environment on the human health and the natural ecosystem.

We are a diverse team. Our team is composed of experts in the latest Engineering trends in Renewable Energies, Green Building designs, HVAC Systems technologies, Water Systems efficiencies, Power Generation & Distribution as well as new technologies in IT & Low Current systems. Our aim is to provide Total MEP Integrated Solutions, customized to meet the full spectrum of Engineering services through a constructive cross-discipline collaboration.

We invest in innovation. In a time of transformation, engineering tools play an intense role. To meet new expectations, we are pushing the boundaries of design by smartly using AEC modeling technologies offering integrated construction models and virtual reality rendering. We are even unlocking and creating new tools to release fast innovative solutions serving the construction industry. We promote advanced education within our teams specially in terms of technology and sustainability, through certificates and diplomas acquired from accredited universities and international organizations.

We expand our market. With the communications technology evolutions, boundaries for project's locations dropped and gave us rise to the opportunity to connect with new clients expanding from the Gulf Countries to North American Countries - mainly Canada. From our side, this expansion enabled us to gain a competitive edge in undersaturated markets, foster our expertise through the diversity of shared opinions and methodologies; from our client's side, this expansion offered them the opportunity to diversify their services, to access additional talents and to reduce their costs.

Our BIM Know-How

The use of BIM is now mandated to ascertain that the planning, design, and construction of projects is a collaborative process with a high-efficiency output. For this purpose, CONSULT EMDC invested in the **BIM world** allowing the 3D simulation of the projects before their execution, facilitating visualization and coordination, analyzing and resolving potential clashes, reducing the risk of abortive works on site and finally making more informed decisions.

Further to the 3D modeling employed for construction and fabrication, CONSULT EMDC can offer its clients the essential functionalities of BIM models through **BIM 4D to 6D**, starting with scheduling tasks, estimating costs and extracting quantities and performing energy analysis.

Throughout the projects, CONSULT EMDC got acquainted with BIM components which play a crucial role in the successful implementation and management of BIM projects, like Common Data Environment (CDE), BIM Execution Plan (BEP), COBie (Construction Operations Building Information Exchange), IFC (Industry Foundation Classes), Asset Information Model (AIM), FM (Facility Management) Integration, GIS (Geographic Information Systems) Integration, 4D and 5D BIM, Virtual Reality (VR) & Augmented Reality (AR) as well as Smart Building Technologies.

CONSULT EMDC provides **Civil 3D** capabilities to meet complex infrastructure challenges in a 3D model-based environment, supported by resources that facilitate well-coordinated processes and high-quality project outcomes..

We, at EMDC, enriched our BIM expertise by closely developing BIM models to renown companies, listed in a later section, integrating the MEP Revit materials families from their selected suppliers, their method of statement and showing their installation and fabrication methods in their details and finally submitting a coordinated model as per the presentation technique expected in each company.

Finally, as a contribution to the worldwide BIM community, we participated in **Autodesk University** classes to share our insights about the Automation tools developed in house, automating time-consuming design tasks using Forge and Machine Learning. Both classes are found at the following links:
https://www.autodesk.com/autodesk-university/article/Combining-Forge-and-Machine-Learning-Automate-Time-Consuming-Design-Tasks-2021
https://www.autodesk.com/autodesk-university/class/Beyond-Dynamo-Powerful-Automation-Potential-Forge-and-Revit-API-2021

Our Success Indicators

Design expertise
We gain our ample expertise through close coordination with International Designers and while executing Value Engineering and Shop Drawings projects.

Shop Drawings
We delivered 10,000 shop drawings within 9 months including client's comment implementation as well as a LOD 400 Revit model and Navisworks model with zero clash for a 250,000 sq.m. mega carpark within 4 months. Moreover, we developed fabrication drawings for projects in Canada, USA, Australia.

Value Engineering & Design Review
We performed Value Engineering and Design Review tasks on designs made by renown international companies.

Site Supervision
We provided site supervision and follow-up for several of the projects we designed, ensuring proper material supply and high-standard installation, thereby achieving the intended quality.

BIM Proficiency
We delivered coordinated Revit models using advanced BIM logistics like Navisworks clash tests, MagiCAD and plugins and add-ons. We continuously keep our teams updated with the latest changes of Autodesk AEC collection.

Development of Virtual Reality & Augmented Reality
We provided our clients with a collection of navigation tools by converting selected areas with particular importance into virtual and interactive environments.

In House R&D
We internally developed automation processes and even featured them in Autodesk University. Also, we developed in-house BIM tools related to each project's needs.

CONSULT EMDC
58 SPECIALISTS
BEIRUT – CAIRO – RIYADH

At CONSULT EMDC, we specialize in BIM modeling and coordination, providing professional expertise in implementing the BIM platform across various projects. From the outset of each project, a dedicated BIM Manager is assigned to ensure that the BIM methodology is fully understood and seamlessly integrated. This ensures that the project team can effectively apply BIM principles throughout the project's lifecycle, optimizing efficiency, collaboration, and precision.

Codes & Standards. Relevant codes set minimum standards for the design and construction of projects, including requirements for fire and life safety, accessibility and constructability. Our team is well-informed about all recognized standards such as American Society of Heating, Refrigerating & Air-Conditioning Engineers (ASHRAE), British Standards (BS), DEWA Regulations for Electrical Installations, European Norms (EN), Gulf Countries Codes (GCC), International Building Code (IBC), National Fire Protection Association (NFPA), Normes Françaises (NF), Saudi Building Code (SBC), Telecommunications Industry Association (TIA-EIA), etc. and the like.

Software. Calculations and simulation software allow MEP engineers to evaluate the performance of their systems prior to implementation in the design. These tools help equipments arrangements, sizing and compliance to code requirements. Our team is always ahead of the latest software covering systems like Lighting, Power, Photovoltaic, Telecom, Sound, CCTV, Grounding & Lightning as well as Firefighting, HVAC Load Analysis, Ducting, CFD Simulation, Smoke Management and Plumbing.

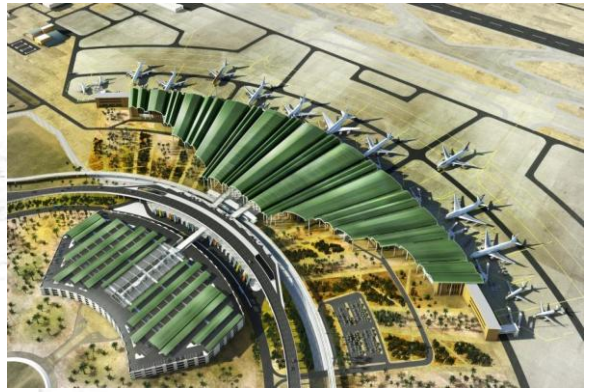

Drawing & Modeling. CAD drawing ensures the ability to provide detailed and accurate representations of designs, allowing professionals to visualize the design in a virtual environment, and making necessary changes and modifications before submission to tender. In addition, 3D modeling enables a greater coordination between different design teams and disciplines, which helps to avoid errors and conflicts in the construction phase, prior to physical implementation. Our team has a high level of proficiency in the renown AutoCAD, REVIT, Navisworks for Drawing and Modeling, supported by certifications and continuous trainings.
